

JOB DESCRIPTION

Company:	Welbot Ltd
Department:	Engineering
Job Title:	Developer
Reporting to:	CTO
Overall Purpose of Role:	To help in developing a Next Generation Cross Platform Digital Application

Background:

Welbot is looking to recruit a software developer to join their growing engineering team. Reporting directly to the CTO and working as part of a team, you'll get experience of all areas of software development using the latest technologies and best-practice methodologies culminating in an understanding of data-driven product development.

Candidates would ideally have a degree in IT, electronics, computing, physics or related discipline, have some programming or relevant work experience and an interest in digital health. A self-starter with good problem solving skills and an interest in new technologies will be well suited to this role.

Ideal candidates should have an awareness and some experience of using React, Javascript, ESLint, npm, webpack (or equivalent), NodeJS, Electron, HTML & CSS, AWS, Microservices and TDD/BDD.

Responsibilities:

- Assisting the CTO with rollout of technical strategy.
 - Maintaining existing development environments.
 - Developing digital health interventions and JITAI's.
 - Updating live projects based on client and internal feedback.
 - Researching and developing new feature branches.
 - Spinning up API integrations for new vendors.
 - Handling technical support issues.
 - Managing the AWS infrastructure for new client setups.
-

Travel: N/A

Desired start date: January 2022

Type of Employment: Permanent
